- Mr. Vo is a great TA. He always helps clarify any work that I do not understand during the lecture. I learn more from this discussion class than my actual lecture class for math.
- The instructor helped in learning the course material through his discussions. He encouraged participation and asking questions. He'd answer students' questions and make sure that they understand the material. Overall, the instructor made the discussions worthwhile and his chill personality helped make the classes more enjoyable.
- Great enthusiasm for teaching the material. Helped with understanding things from the book.
