

UC RIVERSIDE - Student Comments of Instructor,  
Discussion Courses - Fall 2021

Course: MATH 046 Section: 005 - ORDINARY DIFF  
EQUATIONS

Instructor: Khoi Vo

**Question # 18:** YOUR CONSTRUCTIVE COMMENTS ON YOUR GRADUATE STUDENT INSTRUCTOR'S TEACHING SKILLS ARE EXTREMELY IMPORTANT. PLEASE WRITE YOUR COMMENTS IN THE TEXTBOX BELOW. PLEASE LIMIT YOUR COMMENTS TO 2000 CHARACTERS.

- I wish you were the professor and not the TA. Great handwriting, clear notes. You taught better than the professor.
- The discussions were very helpful because the TA showed us how to do the problems on the homework. They were really helpful because some of the homework problems are hard to solve or not even mentioned in the lecture. His explanations also made us understand the materials even better by going over the problems.
- Going over the homework problems was very helpful. I also think that you consolidated what we learned very well so it was good to review from the lectures. Overall, you are a very good TA who understands the material well. I also loved that you posted the worksheets and recorded the zooms. It was very helpful and made the course less stressful.
- Absolutely amazing. I really enjoyed this quarter and making this subject understandable. I wished I could've spent some time using the office hours and I regret not taking advantage of it, but I am very sure the people that attended your office hours did very well on the exam. One minor suggestion is maybe clearly label steps like what you did for 5.4 with the homogeneous equations. Just a simple suggestion I recommend, and other than that, amazing. I wish I could have you again for my upper division math courses. Thank you and enjoy your Christmas!
- Good TA
- Very clearly knew what he was doing and was super approachable to ask questions. Always helped clarify material from lecture and homework assignments.
- Such a great TA!
- Very good saved my homework grade with good lessons
